

NOTE: the time sequence is different from the number sequence!

1. C:\startup\bat\auto_update.bat
2. Ignore (backup for head office)
3. Ignore (Sera collects stock from group companies to show in stock summaries)
4. Ignore (Cloud server)
5. C:\startup\iplog.bat - Records IP addresses while users are login in. Then Sera.exe checks if this IP-address is allowed or not. If not: the user is immediately logged off again. Settings can be made with A085. (see picture below how to set the task manager)
6. Backup made by Sera to c:\sera_backup. Collected by us daily to another server
7. Keeps RDP running c:\rdptrial.bat
8. Reindex /all (stored in a batch file in c:\startup\bat, that makes also the net use settings)
Note: once reindex /all has run it takes only max. a few minutes the next time.
9. Restart 2 = shutdown /r
10. Restart Sera = shutdown /r
11. Create, delete server users, change passwords with c:\startup\iplog\netuser.bat
Requires <http://download.serasoft.com/TOOLS/MEMORYMANAGER/tminst112.zip>
A041,A042,A043 don't have rights to add,delete users or change passwords at server level. They only prepare for this program.
12. Memory optimizer. Can be found at
<http://download.serasoft.com/TOOLS/MEMORYMANAGER/WMOSetup.exe>
